

Angels Care Home Health Services

Sandy Howard, marketing representative for Angels Care Home Health presented the program on May 7 and discussed the various options for care including which is covered by Medicare and what is to be paid for privately. This depends on whether the services are for skilled services or caregiver services. Angels Care Home Health Services are available 7 days a week if needed.

Rehabilitation services include physical therapists, occupational therapists, speech therapists, a falls prevention program, and a light step program for increasing circulation and reducing pain in body extremities. Registered nurses (RNs) are responsible for initial patient assessment, developing a plan of care, and providing skilled instruction. LPN and LVNs provide direct patient care under the supervision of the RNs.
